

First Crystal Lagoons amenity in the nation completed in Tampa suburb

The 7.5-acre man-made lagoon is the main amenity at a development in landlocked Wesley Chapel

December 30, 2017 03:00PM

Crystal Lagoons installation at Epperson development in Wesley Chapel

Crews finished filling a 7.5-acre man-made lagoon near Tampa with water, completing the first amenity at a U.S. real estate development featuring Crystal Lagoons technology. Tampa-based Metro Development Group put the Crystal Lagoons amenity at its Epperson development in [Wesley Chapel](#), a landlocked suburb of Tampa. Epperson is the first of five Florida developments that Metro Development is building with a body of water that

incorporates the technology of Crystal Lagoons, an international company with U.S. headquarters in Miami. In the first quarter of 2018, Metro Development will break ground for a Crystal Lagoons amenity at its Southshore Bay development in southern Hillsborough County.

Artificial lagoons incorporating [Crystal Lagoons' technology](#) require substantially less chemical treatment and energy for filtration than traditional swimming pools. They also require substantially less water than a park of a same size or an 18-hole golf course.

The features of Metro Development's Crystal Lagoons amenity at Epperson will include a water slide, private cabanas, swim-up bar and family beach. — *Mike Seemuth*
